Professional Summary

Java Full Stack Developer with 2+ years of hands-on experience architecting and delivering production-grade, microservices-based web applications. Proficient in Java, Spring Boot, Spring Security, React.js, and RESTful API design. Proven track record of optimizing system performance, owning end-to-end feature delivery, and collaborating effectively in Agile environments. Adept at translating complex business requirements into scalable, secure, and maintainable software solutions.

Technical Skills

Languages: Java, SQL, JavaScript, HTML, CSS

Frameworks & Libraries: Spring Boot, Spring AI, Spring MVC, Spring Security, Spring Data JPA, React.js, Hibernate, JDBC, JUnit, Mockito

Architecture & Concepts: Microservices, RESTful API Design, OOP, Design Patterns, JWT Authentication, Role-Based Access Control (RBAC)

Databases: MySQL, PostgreSQL, MongoDB, Redis, SQL Server

Developer Tools: Git, Maven, Docker, Jenkins, Swagger, Copilot, Claude, Postman

Methodologies: Agile, Scrum, CI/CD Pipelines

Cloud & Messaging: AWS (EC2, S3), Apache Kafka, RabbitMQ

Experience

BPAAS Solutions Pvt. Ltd.

Software Developer

Gurugram, India

Oct 2024 – Present

- Architected scalable Spring Boot microservices and RESTful APIs for enterprise clients; owned backend delivery end-to-end, reducing operational approval cycle times by 40%.
- Spearheaded front-end development using React.js, building role-specific dashboards and user flows secured with JWT and Spring Security (RBAC), reducing manual processing time by 25%.
- Diagnosed and resolved critical database bottlenecks by redesigning MySQL and PostgreSQL schemas and applying targeted indexing strategies, achieving up to 30% improvement in query performance on high-volume datasets.
- Designed and implemented integrations with third-party services and internal APIs, enhancing system interoperability and improving data exchange reliability across services.

Esmagico Tech Studio

Software Engineer Intern

Bangalore, India

Feb 2024 – May 2024

- Optimized Spring Boot APIs and PostgreSQL schemas, reducing response time by 20% and latency by 30%, while delivering documented backend integrations using Swagger/OpenAPI.

Projects

Vendor Portal (Accounts Payable)

Java · Spring Boot · Spring Security · JWT · React.js · MySQL · Hibernate · REST APIs · Maven

- Delivered an Accounts Payable portal, digitizing end-to-end payable workflows including vendor onboarding, invoice submission, multi-level payment approvals, and reconciliation tracking across clinic branches.
- Integrated AI-based invoice extraction APIs to automate data capture from uploaded invoices, reducing manual entry effort and improving processing accuracy.
- Implemented secure, role-based access control for finance, vendor, and admin personas using Spring Security and JWT, enforcing strict authorization boundaries at every API layer.

- Designed optimized MySQL schemas for invoices, payment records, and approval hierarchies; built RESTful APIs powering a React.js dashboard with real-time visibility into payable status and outstanding liabilities.

Gate Pass Management System

Java · Spring Boot · Spring Security · JWT · React.js · PostgreSQL · REST APIs · Swagger/OpenAPI · Maven

- Engineered a full stack Gate Pass Management System, replacing a manual paper-based process with a structured digital workflow for authorizing and tracking the movement of personnel, vehicles, and materials across secured facility zones.
- Architected multi-level approval workflows with configurable routing rules and role-based access control (RBAC), ensuring each gate pass request passed through appropriate security and management sign-offs before authorization.
- Built Spring Boot RESTful APIs for gate pass issuance, approval routing, and tamper-proof audit logging; delivered a React.js operations dashboard providing real-time visibility into access activity and pending approvals.

Personal Projects

Zigato — Food Ordering & Restaurant Management System

[github-repo](#) 

Java · Spring Boot · Spring Security · JWT · Spring Data JPA · MySQL · Swagger/OpenAPI · Git

- Architected a production-ready, microservices-based food ordering platform with multi-role support (customer, restaurant owner, admin) secured via JWT authentication and RBAC.
- Designed normalized relational schemas covering menus, orders, carts, and users; published fully documented REST APIs via Swagger, enabling seamless front-end integration.
- Applied SOLID principles and industry-standard design patterns (Service Layer, Repository Pattern) to deliver a modular, testable, and maintainable codebase.

Education

Atal Bihari Vajpayee Vishwavidyalaya
Master of Science (M.Sc.)

July 2019 – June 2021

Certifications

NSDC & Masai School
Software Development — Full Stack (Java)
